## Installation

## Connection

Network infrastructure     touchONE-desk-55 interfaces

Ethernet cables

touchONE-concentrator

Power supply 5V/3A

## Initial Setup

1. Connect touchONE-concentrator power supply 5 V.
2. Connect touchONE-concentrator to the network. In the default setting, the unit is enabled to get the IP address and DNS servers using the DHCP of the network.
3. Connect touchONE-desk-55 desk interfaces to the same network. **PoE ports are required**.
4. Connect you PC to the same network.
5. Launch Admin Web
   - Using Cue Network Scanner
     - Download **Cue Network Scanner** from www.touchone.eu, section Resources. This application does not require installation.
     - Run Cue Network Scanner.exe and search for units.
     - Launch Admin Web by double click on the selected touchONE-concentrator
   - Using File Explorer
     - Run File Explorer on your computer and select "Network"
     - The units of the touchONE systems can be found in the section "Other devices".
     - Launch Admin Web by double click on the selected touchONE-concentratorFrom the factory, the touchONE-concentrator is empty (reservation suite is not defined) and login is not requred. Admin Web home page is displayed after Admin Web launch.

6. Go to "This unit configuration" and do the basic setup of the touchONE-concentrator unit (IP settings, date and time, etc.).
7. Go to "Administration". Setup window is displayed. Choose and enter reservation suite "Name" and "Password".

9. Press "Save" to store setup. Main page of the administration web is displayed.
10. Click on ⓘ button located in top right corner. It opens **Setup guide**, where complete setup is described.
